At Sequoia Charter Schools we have been front runners in the charter school movement since 1996. Unfortunately, keeping pace with the relentless updates in technology has made this difficult on the digital learning front. We are a K-12 environment, so we see our students from their earliest age, often for many years. Many of our students are in the lowest socioeconomic level and most do not have internet access at home. We keenly feel the responsibility to prepare them for their future lives in college and career. We have used E-Rate to bring internet to our schools, but we are falling behind. As we create additional digital opportunities for our teachers and students, the need for additional broadband here is quite obvious. I respectfully urge the FCC to increase funding for the E-Rate program so that all students in our nation can have access to high-speed broadband.
